

SDG 7.2.2

Does your university as a body have plans to upgrade existing buildings to higher energy efficiency?

There are plans to upgrade existing buildings to improve energy efficiency.

In order to increase the energy efficiency of buildings and structures that are planned to be built, reconstructed, and fully and currently repaired in 2021 and in the following years, heat-retaining building materials are used for installing solar panels, installing heat-retaining window and door frames, and installing wall structures.

Energy efficient buildings are primary concern to the Samarkand State University. Therefore, the Vice-Rector, Construction and Renovation has responsibilities to audit old buildings and other infrastructure to calibrate these for energy efficiency.
